

Office 365 & Citrix supporting technology cheat sheet v1.0

| Product: | Citrix Full User Layer | Citrix Office 365 Layer | WEM/UPM | Server 2019 Search |
|-------------------------------|------------------------|---------------------------|----------------------|-------------------------------|
| | | | | |
| Feature: | | | | |
| VDI/RDSH | VDI | VDI | VDI + RDSH | <i>VDI + RDSH</i> |
| Full profile/.OST only | Full profile | .OST | .OST | <i>Not supported</i> |
| OneDrive, S4B, caching etc... | Not supported | Not supported | Not supported | <i>Not supported</i> |
| Per user Outlook search index | Not supported | Not supported | Yes | <i>Yes</i> |
| Production/Labs | Labs/beta | Production | TBA – within 90 days | <i>TBA</i> |
| Part of | Citrix App layering | Citrix App layering | UPM/WEM | <i>Windows Server 2019</i> |
| License requirements | Platinum | All editions | All editions | <i>TBA</i> |
| Other... | * Either full or 365 | Subset of full user layer | 32-bit Outlook only | <i>Not limited to Outlook</i> |

* When you deploy a Citrix user layer you need to choose between a full or 365 layer, you cannot use both. I've deliberately left out Microsoft's User Profile Disks as I wanted to focus more on what Citrix has to offer.
